Model Audit 1

Publication Shells and Tables 2

Python / SVG composition shell

The diagram illustrates the cohort assembly and validation process. It is divided into two main sections: A. Cohort assembly and B. Validation and model hierarchy.

A. Cohort assembly:

- Patients screened (n = 186, Consecutive eligible records)
- Eligible after criteria review (n = 142, Complete baseline variables)
- Included in analysis (n = 128, Primary analytic cohort)
- Missing follow-up (n=14) Excluded before model evaluation

B. Validation and model hierarchy:

- Analysis split: Training (75% temporal derivation), Validation (30% locked holdout)
- Review boundary: Outcome adjudication, Source ledger required, Publication surface, Figure catalog controlled
- Endpoint inventory: Primary endpoint (n=31) Cardiovascular event, Secondary endpoint (n=44) Hospitalization

Python / SVG composition shell

The diagram shows the submission comparison overview. It includes two main components: A. Cohort and split, Locked analysis cohort, and B. Primary endpoint, Cardiovascular mortality.

A. Cohort and split, Locked analysis cohort:

- Analytic cohort: 15,787 eligible patients
- Internal validation

B. Primary endpoint, Cardiovascular mortality:

- Validation C-index: 0.857
- Locked split
- Supportive endpoint
