R / ggplot2 evidence

This is a Receiver Operating Characteristic (ROC) curve plot. The y-axis is labeled 'Sensitivity' and ranges from 0.00 to 1.00. The x-axis is labeled '1 - Specificity' and ranges from 0.00 to 1.00. A dashed diagonal line represents the performance of a random classifier. A solid dark blue line represents the 'Primary model'. The curve starts at (0,0), rises steeply to approximately (0.1, 0.65), then continues to rise more gradually, reaching (1,1).

R / ggplot2 evidence

A

This plot compares two models. The y-axis is labeled 'Y axis' and ranges from 0.00 to 1.00. The x-axis is labeled 'X axis' and ranges from 0.00 to 1.00. A dashed diagonal line represents the performance of a random classifier. Two solid lines are shown: a dark blue line for the 'Model' and a teal line for the 'Comparator'. The 'Model' curve is consistently above the 'Comparator' curve, indicating better performance. Both curves start at (0,0) and end at (1,1).

R / ggplot2 evidence

This plot shows the net benefit of a primary model compared to a 'treat all' strategy across different threshold probabilities. The y-axis represents 'Net benefit' from 0.00 to 1.00, and the x-axis represents 'Threshold probability' from 0.00 to 1.00. A dashed horizontal line is at y=0.00. The 'Primary model' (dark blue) starts at approximately (0.05, 0.18) and ends at (0.45, 0.08). The 'Treat all' strategy (teal) starts at approximately (0.05, 0.15) and ends at (0.45, -0.02).

Threshold probability	Primary model	Treat all
0.05	0.18	0.15
0.10	0.16	0.12
0.20	0.12	0.08
0.30	0.08	0.04
0.40	0.05	0.00
0.45	0.08	-0.02

r_ggplot2

canonical

R / ggplot2 evidence

This plot shows the net benefit of a locked survival model compared to a 'treat all' strategy across different threshold probabilities. The y-axis represents 'Net benefit' from -0.05 to 0.15, and the x-axis represents 'Threshold probability' from 0.00 to 1.00. A dashed diagonal line represents the 'treat all' strategy. The 'Locked survival model' (dark blue) starts at approximately (0.05, 0.18) and ends at (0.45, 0.05). The 'Treat all' strategy (teal) starts at approximately (0.05, 0.15) and ends at (0.45, -0.02). A grey bar with the letter 'A' is at the top of the plot area.

Threshold probability	Locked survival model	Treat all
0.05	0.18	0.15
0.10	0.16	0.12
0.20	0.12	0.08
0.30	0.08	0.04
