Volcano plot A displays log2 fold change on the X axis and -log10 adjusted P on the Y axis. The plot includes a horizontal dashed line at Y ≈ 1.3 and two vertical dashed lines at X = -1.0 and X = 1.0. A light blue shaded region at the top is labeled 'A'. Data points are categorized as 'background' (grey). Labeled points include COL1A1 (approx. -1.3, 4.0) and CXCL9 (approx. 1.3, 4.5).

Gene	log2 fold change	-log10 adjusted P
COL1A1	-1.3	4.0
CXCL9	1.3	4.5
background	-1.1	0.8
background	-0.8	0.5
background	0.9	-0.4
background	1.3	-0.7

[payload](#) · [layout](#) · [PDF](#)

Legacy Python baseline

Two side-by-side volcano plots, A (Transcriptome) and B (Proteome), showing log2 fold change on the X axis and -log10 adjusted P on the Y axis. Both plots include a horizontal dashed line at Y = 2 and vertical dashed lines at X = -1.0 and X = 1.0. Data points are categorized by regulation status: Upregulated (teal), Downregulated (dark blue), and Background (light green). Labeled points include COL1A1 (approx. -1.3, 4.0) and CXCL9 (approx. 1.3, 4.5).

Gene	Panel	log2 fold change	-log10 adjusted P	Regulation
COL1A1	A	-1.3	4.0	Downregulated
CXCL9	A	1.3	4.5	Upregulated
COL1A1	B	-1.3	3.1	Downregulated
CXCL9	B	1.3	3.3	Upregulated
Background	A	0.1	0.6	Background
Background	B	0.1	0.7	Background

The figure consists of two panels, A and B. Panel A, titled 'Phenotype composition', is a horizontal bar chart showing the 'Share of index cohort (%)' for Phenotype A and Phenotype B. Phenotype A is represented by a dark teal bar reaching approximately 40% on the x-axis (0 to 60). Phenotype B is represented by a dark teal bar reaching approximately 55% on the x-axis. Panel B, titled 'Within-phenotype gap rates', is a heatmap showing gap rates for Phenotype A and Phenotype B across four categories: 'Severe glycemia low-intensity', 'Uncontrolled glycemia no drug', 'Hypertension no antihypertensive', and 'Dyslipidemia no lipid-lowering'. The color scale for gap rates ranges from 0 (light blue) to 100 (dark blue). The data values are: Severe glycemia low-intensity (18.0% for Phenotype A, 7.0% for Phenotype B), Uncontrolled glycemia no drug (24.0% for Phenotype A, 11.0% for Phenotype B), Hypertension no antihypertensive (16.0% for Phenotype A, NA for Phenotype B), and Dyslipidemia no lipid-lowering (21.0% for Phenotype A, 14.0% for Phenotype B).

The figure consists of two panels, A and B. Panel A, titled 'Cohort assembly', is a flowchart showing the process from 'Patients screened' (n = 186, Consecutive eligible records) to 'Eligible after criteria review' (n = 142, Complete baseline variables) to 'Included in analysis' (n = 128, Primary analytic cohort). A red box indicates 'Missing follow-up (n=14) Excluded before model evaluation'. Panel B, titled 'Validation and model hierarchy', is a flowchart showing the process from 'Analysis split' (Training: 75% temporal derivation, Validation: 30% locked holdout) to 'Review boundary' (Outcome adjudication, Source ledger required, Publication surface, Figure catalog controlled) to 'Endpoint inventory' (Primary endpoint (n=31): Cardiovascular event, Secondary endpoint (n=44): Hospitalization).
