Python

Figure showing two plots (A and B) illustrating Predicted response probability versus Age (years) and Albumin (g/dL). Plot A shows the relationship for Age, with a vertical line indicating Median age. Plot B shows the relationship for Albumin, with a vertical line indicating Median albumin. Both plots include ICE curves and a PDP mean line.

Model Audit 1

Publication Shells and Tables 3

Python

The figure consists of two panels, A and B. Panel A, titled 'Phenotype composition', is a horizontal bar chart showing the 'Share of index cohort (%)' for Phenotype A and Phenotype B. Phenotype A is represented by a dark teal bar (approx. 45%) and Phenotype B by a lighter teal bar (approx. 55%). Panel B, titled 'Within-phenotype gap rates', is a heatmap showing 'Gap rate (%)' for various clinical conditions across Phenotype A and Phenotype B. The color scale ranges from 0 (light blue) to 100 (dark blue). The conditions and their gap rates are: Severe glycaemia low-intensity (18.0% for A, 7.0% for B), Uncontrolled glycaemia no drug (24.0% for A, 11.0% for B), Hypertension no antihypertensive (16.0% for A, NA for B), and Dyslipidemia no lipid-lowering (21.0% for A, 14.0% for B).

The figure consists of two panels, A and B. Panel A, titled 'Cohort assembly', is a flowchart showing the progression from 'Patients screened (n = 186)' to 'Eligible after criteria review (n = 142)' to 'Included in analysis (n = 128)'. A side branch shows 'Missing follow-up (n=14)' leading to 'Excluded before model evaluation'. Panel B, titled 'Validation and model hierarchy', shows the 'Analysis split' (Training, 75% temporal derivation; Validation, 30% locked holdout), 'Review boundary' (Outcome adjudication, Source ledger required, Publication surface, Figure catalog controlled), and 'Endpoint inventory' (Primary endpoint (n=31), Cardiovascular event, Secondary endpoint (n=44), Hospitalization).
